The Mini Micron X bite indicator is a high quality and durable product that will please you for a very long time. This bite indicator has two extremely visible 5mm multicolour LEDs in green, blue, red and orange, positioned at the top of the ears of the bite indicator so that you can always see them. LED colour is changed by pressing the volume button continuously and operating the sensitivity button at the same time. LED light intensity is adjustable. It has four levels of volume, pitch and sensitivity, all of which you can adjust. This allows you to find the perfect setting for your particular needs. The drop bite indicator is also compatible with the Mini Micron X receiver so you always know when you get a bite.

With the Mini Micron X bite indicator you can concentrate fully on the fish when fishing. Because this high-quality bite indicator takes control for you. The Fox Mini Micron X is a compact and powerful bite indicator that is perfect for fishing. Thanks to the 2.5mm power output socket, you can connect illuminated hook-on bite indicators such as the Fox Illuminated Swinger. This allows you to fish at dusk or at night. The LEDs in this bite indicator start flashing when the batteries are down and need to be replaced. The conical speaker provides a clear sound so you can hear the bites better. The rubber inserts in the bite indicator ears protect your rod and further secure it during strong bites. The on/off toggle switch is easy to operate and the profile counter screw ensures secure mounting. The Mini Micron X is powered by small N-type batteries (LR1) and has a 3/8 BSF metal screw thread.

- Volume control button with seven levels
- Tone control button with four settings
- Sensitivity control button with four different settings
- Drop back differential
- Compatible with Mini Micron X Receiver
