

Jenzi Smart LED electric float with integrated bite indicator turquoise red

Jenzi

Product number: JE-SLEP-TR

These SMART LED electro poses have an integrated bite indicator in the antenna.

12,50 €* 12,50 €

By means of a built-in acceleration sensor "gravity sensor", the pose detects when a fish bites. When the fish bites, the antenna immediately changes colour. The colour change is clearly visible both by day and by night. The sensor is so smart that it distinguishes well between a normal sideways movement (swell, current in the water) and a bite. The battery is installed directly in the antenna. The pose is operated with a 3V rod battery, which is not included in the scope of delivery. LED electro float with integrated bite indicator. Slim continuous pose with easily visible long antenna.

Please use the following lithium battery: CR 425 3V or CR 435 3V
