

iCapiro Active Bait Caps Set #1 Stinky Herring Attractant

iCapiro

Product number: IC-ABC1-SH

Revolutionary active bait caps for fishing lures

9,99 €* 9,99 €

The revolutionary iCapiro active bait capsules with real fish scent are new little helpers on the fishing market, that, unlike other attractants, which are usually offered as sprays, pastes or oils, continuously release their attractant over a longer period, regardless of current speed and bait game. Also, the dosage of the attractant is increased, which forces even cautious predators to bite.

Mount the CapCell just in front of your fishing lure or by using it with help of the iCapiro sticks directly in the rubber to turn your bait into an irresistible catcher for predators. Another advantage is the installation without adhesives or pastes, which often effect the opposite of what is supposed, because of their own odor. The capsules are activated by contact with fresh and salt water and after 2 - 5 min, the attractant is released controlled. The release takes place depending on the fishing technique, bait guidance and current speed about 0.5 - 2 hours. The iCapiro active bait capsules do not pollute the environment.

Content and features:
