

Jenzi Kevlar Trace Leader Rig System Catfish 4

Kevlar Trace Leader Catfish 4 - This system is based on the current trend of catfish fishing on the ground specially tuned. Many of the big fish are enticed mainly in the cooler seasons due to the bite. These requirements are borne by the clever design of this system account. The use of this extends to almost all bait options. Bait fish and all types of natural bait range can hereby be presented hovering over the ground. Installation is very simple. The single hook is placed in the mouth of the bait. The drilling is then treated with a little loose Trace line (not stretched) of the fish with a hook fixed to the skin. Here is fished mostly with upstream ground lead in flowing water sections.

All Catfish Rigs are professionally bound to KEVLAR®.
