

Daiwa Prorex Flex Jig System Tungsten Jig heads Fluo Pink

Daiwa

Product number: DA-15412-30X

New jig system, that will lead to new catching results when angling together with the Flex Jig System FN hooks.

0,00 €* 0,00 €

This extremely successful system was developed especially for the ultra-light fishing for perch and zander. Due to the flexible suspension of the hook, the bait receives an incomparable, tilting action when hitting the ground, which in particular attracts zander and perch to bite. Depending on the weight and selected hook size, the Tungsten heads are already suitable for very small rubber baits of 3 - 10cm in length. The 3D eyes provide additional stimuli in the water.

The Prorex TG Flex Jig heads are made of pure tungsten and thus have a much higher density than conventional lead heads. So you can fish finer and easier than with comparatively heavy lead heads, as there is less air and flow resistance. The dangling danger is reduced and the fishing sensitivity is significantly increased.

These small heads are also great for fishing in trout lakes!

Available in the colors copper, fluo orange and fluo pink.
