

VMC BlackFlex 1x7 Steel Leader C718 10m

Product number: CA-BF17

BlackFlex steel leader - easy to handle and durable leader material

5,09 €* 5,09 €

The BlackFlex steel leader is a high quality and reliable material for any angler who values an easy and stable connection between main line and leader. The 1x7 braiding pattern ensures high load-bearing capacity and durability, while the nylon sheath protects the material from kinks and abrasion.

Using the BlackFlex is very easy and does not require any special tools such as crimping sleeves or pliers. The material can simply be threaded into the swivel or carabiner and then welded quickly and easily with a lighter using the twizzling method (severalvaches wrapped around themselves). The result is a neat and stable connection that can withstand the stresses of the drill.

The BlackFlex is ideal for bait fishing as well as all types of spinning. It can also be used as a material for stingers or assist hooks to minimise the risk of losing the catch. The leader is available in the colour green and comes in a handy pack of 10 metres.

In summary, the BlackFlex steel leader is an excellent choice for anglers looking for a reliable, easy-to-use and durable leader material.
