

STROFT Color Monofilament Fishing Line Yellow Fluo

Stroft

Product number: ST-C-G

Excellent properties when compared to other Polyamide lines.

from 3,19 €* 3,19 €

A covering colored monofilament of the premium class. Ideal for winter and ice fishing and for all types of fishing where a highly visible, soft and supple line with yet the highest possible tensile strengths is required.

STROFT color is manufactured using exactly the same process as the STROFT GTM and also undergoes the entire process of finishing and tuning. The difference lies solely in the base material. In order to produce highly visible and high-contrast colored cords, STROFT color uses a polyamide alloy with relatively high dye contents. Naturally, the increased dye content slightly reduces the tensile strength values. Therefore, the colored polyamide alloy must in each case be such that the subsequent tuning permits optimization of softness and suppleness as well as realization of the highest possible tensile strengths. STROFT color cords have achieved this outstandingly well. Compared to other, similarly strongly colored lines, STROFT color has the highest load-bearing capacity values and is above average soft. Thus, this line is used especially when fishing type or waters require a highly visible and relatively soft fishing line and one is not willing to accept greater sacrifices in carrying capacity and knot strength. In all three colors excellent for ice and winter fishing and in the color "black" ideal for carp fishing.
