The new **17' Morethan PE SV 8.1L-TW** baitcast reel has especially been developed for the application with braided lines. The ultra-lightweight SV spool and the Daiwa Air Brake drag system were particularly optimized for the use of PE lines. Thanks to the application of two MagSealed ball bearings at the side axis, no water or dirt particles can intrude – thus this reel is also ideally suited for the use at saltwater. The SV spool is made of tough duraluminum, which usually is applied at airplane constructions and casts lures from 7gr on to large distances. The TWS system enhances the casting distances compared to conventional baitcast reels up to 10%.

Technological features

- 10 ball bearings (incl. 2 MAGSEALED® ball bearings)
- HARDBODYZ® reel body
- Magforce®-Z magnet drag system
- SV spool
- DIGIGEAR® II
- UTD drag system
- T-Wing system (TWS™)
- Star drag with click-system
- Soft-touch handle knob
- Left hand version
