

Daiwa Prorex Spin Spinning Reel

Daiwa

Product number: DW-10600

Spinning Reel from Daiwa Prorex

0,00 €* 0,00 €

This spinning reel from the Prorex range offers a multitude of technical highlights for the dedicated angler at uncompromising spin fishing for predators.

The aluminum body cares for optimal stability and thus a distortion-proof storage of the gearing for high retrieving power. The DAIWA Digigear II construction enables permanent silky-smooth running and ensures an optimal line wrap – even when thin braided lines are used. The patented Air Rotor reduces the starting resistance at retrieving, further optimizes the balance and additionally reduces the reel's weight. The new ATD drag system provides an optimal and even drag power and eliminates the usual higher starting resistance – perfect for all extreme fighting situations! Especially for the use of braided lines the aluminum spool has been equipped with a central rubber ring, which completely prevents slipping of smooth braided lines under strain.

The size 3020 has been especially designed for the use with braided lines, the semi-shallow spool features a line capacity of 200m PE 2.0 (0.20mm J-Braid).

The size 2500RA has been especially designed for a better power transmission at retrieving. Here a reel body of the size 3000 is combined with the rotor and spool of the size 2500. Thanks to the larger gearing of the 3000 sized body the retrieving power is markedly increased compared to conventional 2500 sized reels (up to 40%!).

With the DAIWA Prorex reels you are prepared for your monster!

Daiwa Prorex Spin Features:

- HARDBODYZ® aluminum reel body
- AIR ROTOR®
- AIR BAIL®
- 8 ball Bearings

- ATD™ drag system
- DIGIGEAR® II
- Infinite Anti-Reverse®
- Carbon fiber drag discs
- Cross Wrap™ system
- Twist Buster® II line roller
- ABS® II aluminum spool
- Aluminum handle
