The LIQUEÖ is a cream of the crop when it comes to hardbait fishing. This casting rod was specially developed for fishing with twitchbaits, cranks, spinnerbaits and chatter baits, but also jerkbaits. The concept of this rod is uncompromising and leaves nothing to be desired on the water.

The Blank

The core of any fishing rod is the blank, and in this case we've spent a long time tinkering around to find the perfect blank. With a Med-Fast action, the rod has a consistent action that never loses its dynamism and still works well under full load to keep the upper hand in the hot phase of the drill of a capital fish and to land the fish safely. The bite detection is phenomenal on this rod and the strike is more of an automatic reflex after the crystal clear transmission of the bite.

The Handle

The high-quality natural cork handle on the reel seat with logo provides a secure grip for casting, baiting, retrieving and drilling. The short handle allows you to animate and guide all kinds of hardbaits perfectly, even in tight spaces. The Split Grip with a beautiful K-Carbon in combination with the EVA end looks very elegant and is at the same time incredibly handy and functional.

The Reel Holder

The Fuji reel seat is very ergonomic in the hand and allows a perfect grip and fatigue-free fishing.

The Guides

We only use Fuji components for this model as well. For these rods, we have designed the ringing according to the K concept in order to achieve maximum casting distances, target accuracy and a perfect distribution of power on the blank. The result is a coherent ringing concept that can be used with any reel and any line.
