Spin Rod from Daiwa Prorex

0,00 €* 0,00 €

The Prorex XR spinning rods from DAIWA offer latest rod construction art in combination with the exclusive DAIWA technology! The lightweight and extremely fast blank features an outrageously pleasant handling and enables permanent fatigue-proof fishing. The sensitive tip action ensures an optimal lure presentation, perfectly buffers flights and headbutts during the fight with the fish and thus reduces the threat of losses. The use of HVF nanoplus carbon fiber material leads to a quick and tensed action and enables long casting distances. By using nano technology at the carbon fiber material a more lightweight and at the same time tougher blank has been designed, which features great power reserves. The X45 blank construction reduces twisting during the cast and enables more targeted casts. An even bending curve under strain is guaranteed by the V-joint spigot joint. The original Fuji TVS reel seat ensures a direct contact to the blank for optimal lure control. The Prorex XR rods offer an outstanding price-performance ratio.

The Prorex XR rods have been awarded as the best new rods for the season 2017 at the Efttex 2016!

Daiwa Prorex XR Spin Features:

- HVF® carbon fiber blank
- Nanoplus carbon
- X45® carbon fiber construction
- V-Joint® spigot joint
- Fuji® Alconite K-guides
- Fuji® TVS reel seat
- Premium Hard-EVA handle
- Exclusive transportation holdall
