Gunki Chooten, a new series of extraordinary rods.

The new Gunki Iron-T Chooten series are the best rods Gunki has ever built! All made exclusively with Japanese high performance carbon mats from Toray (highly modulated IM30 & IM40 carbon with optimized resin content). The profile of the blanks was designed for maximum precision and resonance. The sensitivity of the rods to the angler has been achieved through the use of Fuji reel seats and carbon parts in critical areas. The direct contact of the hand to the blank is always guaranteed, which makes it impossible to miss the information provided, such as structure of the ground and hesitant mumbblings, etc. Gunki went to great effort to make the rods custom-made. Therefore most of them will fit into the angler's hands like a glove. Depending on the model, Fuji K guides or Fuji Micro guides were used to guarantee the lightness and balance of the blanks. All rods have a very nervous action and are designed "fast" or "extra fast". This design guides high precision casting and perfect animation of the bait. If you need to jiggle fast and hard, then the bait follows immediately after each movement of the rod without delay. For maximum stability when fighting with big predators, the handpiece is reinforced with a woven carbon mat. Fast and stylish rods that embody 100% of the spirit of the Iron-T series!

The Gunki Chooten C 215ML is a small technical marvel! This baitcaster model has been designed for linear finesse methods (micro jig, drip shot, smaller softbaits ...). The fine tip makes it easy to throw light weights and inhale the bait while biting. Especially when fishing with thin lines, the tip must not be too hard! With a length of 2.15m, long casts are a breeze. Top also for small cranks and blades.
