

Gunki Trout fishing rod Reinbo

Immerse yourself in the world of Reinb?, with the Gunki Trout Area Fishing concept, to try a fishing style that is addictive and is about to conquer the whole of Europe. This is about the technically demanding fishing for trout in the lake with artificial lures. For maximum fun it needs the right material and then the successes come naturally! Anti-tangle SIC rings, long-leg and micro-rings.

Developed for trout fishing with small spoons and micro-baits of any kind, using thin lines. With these rods it is easy to throw precisely because they are specially adapted to the special needs of the area fishing. The blank is made of HM carbon with a regular action. It carries the light baits far out without much effort. Rods with a lot of feeling that convey every bite. Precise angling of the baits becomes child's play without producing any annoying entanglements at the top. The mixture of flexibility, sensitivity and power makes these rods ideal for their next trip to the trout lake!
