Zander Walleye Fishing Rods

from 89,99 €* 89,99 €

XMG-1000 Multidirectional: The basis of the XMG 1000 technology lies in the use of an extremely high amount of fiber content which is arranged in the unidirectional carbon knitted fabric. This makes it possible, in comparison to the standardized carbon fiber matting, to achieve a nearly 100% utilization of the fiber properties. Hence resulting in extremely light angling rods with enormous stability. In addition, biaxial ordered fiberglass is incorporated through the application of low viscosity epoxy resins. The result: Light, resilient angling rods with high stability and a large amount of reserve strength for a penetrating impact and total control in execution.

Soft Zander Walleye 2 - 12 g

Wonderfully light, highly sensitive in the tip and hard in the spine. Meant for delicate fishing with small artificial bait in the 4 inch classification such as our RIVER SHAD or baitfish.

Speed Zander Walleye 30 - 80 g

A Zander rod that suits the taste of Jenzi team angler Torsten Ahrens. Light, for all day jigging and extremely fast for sure catching of tender nibblers. A powerful caster, able to present bait with precision and accuracy.
