A-TEC SPINNING ROD CRAZEE EGING AORI STICK

Already on the Osaka Fishing Show in February 2015, we were the new Crazee! Take Rod manufacturer A-Tec first time in hand and were immediately impressed, what a gorgeous design and great blanks could be realized to the opinion of our unbeatable price of 95 Euro.

With this rod series we can finally also provide customers with a response that have been asking for years for fast JDM rods in the boarding area of less than 100 euros. Our regular customers is A-Tec certainly known as a manufacturer of rods, reels and lures from Tailwalk. The Crazee! Bass is not sold under the Tailwalk label, but also produced by A-Tec.

The appearance is extremely elegant and modern, the carbon look is perfected by using noble metal elements and the Fuji ECS reel seat give the baitcasting reel a safe stop. Also in terms of speed, the blanks are as you know it from A-Tec!

The Eging rods are used in Japan for fishing squid, which are caught with special "Egi" Lures. The fishing method itself is indeed fundamentally different to the traditional rubber fishing with jigs, but the rods properties correspond exactly to what we know as jig rod! Therefore, the Crazee Eging Rod are perfectly suited to throw classic rubber fish on jig head and lead.

- 98% carbon, 2% glass
