

Tailwalk Degeki Spinning Rod

Tailwalk

Product number: TW-DGK-S

A universal spinning rod series designed primarily for perch fishing as well as light zander and pike fishing.

0,00 €* 0,00 €

The Japanese DAGEKI export hit is gradually conquering the German charts as well. The blanks of the Tailwalk DEGEKI rod series are comparable in construction to other Tailwalk series such as the Fullrange, but the set-ups in terms of length and casting weight are adapted to the requirements in Europe and are designed more favourably by dispensing with SIC inserts. All DAGEKI rods are equipped with durable FUJI Alconite rings and feature a fast / tip-emphasised action with a strong backbone. The factory-set casting weight range can be permanently pushed to the maximum with every model. However, in order for the DAGEKI blanks to load up reasonably, especially in the lower casting weight range, a little more casting weight than specified is necessary (approx double the specified WG minimum).

As this is a universally applicable spinning rod series that was primarily developed for perch fishing as well as light zander and pike fishing, the DAGEKI rods can be fished without any problems with all baits and mounts relevant for these target fish. Jigs, rigs and hardbaits can be fished just as well with the DAGEKI as flasher or spinnerbaits. A real all-rounder!

So if you're looking for an inexpensive, long Japanese spinning rod for perch and zander fishing, the Tailwalk DAGEKI is a rod you can buy with a clear conscience!

Tailwalk DAGEKI S672L

The universal model for perch fishing from the bank. The two-piece DAGEKI S672L has an optimum casting weight range of approx 1.8 to 7 g. Depending on the lure and type of rig, the S672L is suitable for approx 2 to 5 g jigs / rigs plus 2 to 3 inch rubber baits, 40 to 60 millimetre long twitchbaits, 40 mm long SR crankbaits as well as Chatter baits, spinnerbaits and flashers up to approx 7 g total weight.
