AGS Spin Rod from Daiwa Prorex

0,00 €* 0,00 €

The DAIWA predator range Prorex of course also features a premium rod series, which is equipped with almost all technical highlights from the Japanese DAIWA rod construction technology. The Prorex AGS rods impress by their light weight and their stiff blank, which features a sensitive tip action. The SVF nanoplus material cares for lightweight and stiff blanks with optimal resilience. Thanks to the integration of nano technology at the carbon fiber material the rods have become even more lightweight and strainable at the same time. The blank transmits every lure movement to the handle section and you feel even soft taps. The X45 blank construction reduces twisting during the cast and enables more targeted casts. An even action with an optimal bending curve under strain is guaranteed by the V-joint spigot joint. An additional highlight is the use of DAIWA's exclusive AGS carbon fiber guides, which are markedly lighter compared to conventional guides and additionally optimized the rod's action and sensitivity. Thus the rods react extremely quickly and feature almost no torque – very long and precise casts are the consequence.

Daiwa Prorex Spin AGS Features:

- SVF® carbon fiber blank
- Nanoplus carbon
- AGS® carbon fiber guides
- X45® carbon fiber construction
- V-Joint® spigot joint
- Ergonomic DAIWA® reel seat
- Premium Hard-EVA handle
- Removable hook keeper
- Exclusive transportation holdall
