The Native Landing Gear by Boonedox is the perfect additional equipment to your Native Watercraft kayak when you need a simple and easy way to transport it without effort. Simply lock the rollers under the boat and then pull it behind you. Once you are in the water, simply fold the rollers up and lock them there. The device is built in a way, that no valuable storage space is lost on your kayak. On the contrary: the folded-up wheels make it even easier to fix your cargo in the rear tub.

The Native Landing Gear is compatible with all Native Watercraft kayak series. Maximum width is approx. 105 cm. The aluminum bar can be shortened if necessary.

The landing gear has been tested and approved for a total load (kayak and accessories) of 81.5 kg.

The Landing Gear axles and wheels are only intended for short-term transport and not for storing a kayak. Storage on the landing gear can damage both the wheels and the hull of the kayak itself.
