

Native Watercraft Transom-Style Motor Mount

Native Watercraft

Product number: NWC-TSM

Mounting system for Native Watercraft kayaks to assemble an electric motor.

0,00 €* 0,00 €

The **Transom-Style Motor Mount** allows you to use an electric motor in your Native Watercraft kayak instead of the Propel pedal drive. The reinforced area is very similar to the transom bar of a(n) (inflatable) boat, where electric motors are usually installed, and replaces it.

Thanks to the 2 different sizes, every Propel kayak can now be equipped with an electric motor. To get to know which size you need, please refer to the list.

- Transom-Style Motor Mount 14"
