Daiwa

Product number: 15413-006

Softbait from Daiwa Prorex

Weight: 0.03 kg
11,90 €* 11,90 €

The Hybrid Crank combines the advantages of a plug with the benefits of a soft plastic lure. Due to the plastic body it produces softer vibrations in the water which resembles a real fish. Additionally the lure is kept longer in the mouth at the bite, which can be crucial for success in difficult waters. Due to the long diving lip the lure is gaining depth quickly and thus is ready to catch immediately. The plastic body also shows an outstanding action with very slow retrieving. The Prorex Hybrid Crank is very catchy – no matter if used for twitching, jerkbaiting or at steady retrieving.

The silent construction (without rattles) is increasing your bite rate especially at highly frequented waters. The size of 14cm makes this lure a real all-rounder for zander, pike and perch.

The Hybrid Crank is constructed in a way to enable an easy and fast exchange of the plastic body after many attacks – simply rack it to the hard body – ready to continue fishing! The Hybrid Crank is delivered including one additional tail.

- Floating
- swimming depth ca. 2,0m - 3,0m
