

Gunki Lure Scunner 135S Twin Swim bait

Gunki

Product number: GU-SC135S

High quality swimbaits for pike fishing.

23,59 €* 23,59 €

This "two-piece" swimbait was developed based on the original design of our OTACHI Jerkbait. Its compact and beefy body brought the perfect shape for a lure to move at very low speed under the water surface. With its length of 135 mm and a weight of just 55 g, it has the ideal prerequisites for finding big pike without having to use too heavy equipment. But its best feature is undoubtedly its ability to present itself in a perfect S-line even during ultra-slow, linear retrieves. The bite rate will be incomparable to others!

A little hint: If you need to slow the SCUNNER down and achieve a wider S-line, simply remove the rear hook of the lure to do so. Equipped with an extra eyelet under the head to mount an additional weight, the SCUNNER can dive deeper through the different water layers. So, depending on the condition of the water and / or the behaviour of the predatory fish, you can offer it perfectly as prey at your spot where you want it to attack. The hook on the belly is mounted on a ball-bearing swivel and the tail section is removable.
