Hybrida Twitchbait B-1. Another classic from the Hybrida forge! This bait has evolved extremely in recent years, starting with the designs that leave nothing to be desired, about the casting properties up to the running behaviour. Everything was optimized and what came out is an absolute killer! Not for nothing one of the most famous lures of Hybrida!

The B-1 Twitchbait is a sophisticated wobbler from Hybrida, which is basically a combination of a flat-running wobbler and jerkbait. It has phenomenal casting properties and with its 35g it can even be fished with very light equipment. Once you have placed the cast, you can simply retrieve or fish Stop&Go. Or you retrieve it with short twitches, which causes the bait to flake off to the right and left. Thus, one can combine maximum effects with minimum speed of retrieval. The B-1 Twitchbait is an excellent bait for pike and zander, but also asp and chub take it.
