

Hybrida lure K3 WF 11cm

The classic hybrida! With its high-backed form, which is a thick bass or bream, he is particularly catchy for big pike. But also big perch, chub and perch can outwit the K 3. The compact shape can be cast very far. With a diving depth of 0-3,5 m, this version is particularly suitable for shallow water in the spring or middle depths in the fall.
