Illex Mini-Spoon AWB York 3,5cm 1,5g

Our York Mini has a lazy looping action through the water. On the descent the lure oscillates with a provocative rolling movement that is often enough to provoke an immediate take from a trout holed up near an obstacle or the margins. This slender lure lends itself to small to medium sized rivers in particular later in the season when trout get wary of classic lures. Great on relatively slow shallow rivers and surprisingly effective for reservoir fishing.
