Experience the Illex Water Monitor 95 - Sinking Stickbait

Immerse yourself in the fascinating world of the **Illex Water Monitor 95**, a **sinking Pencilbait** renowned for its impressive performance. With its internal 10 stabilising chambers and robust ABS construction, this lure offers an unrivalled fishing experience.

The **Water Monitor 95** is the perfect choice when the fish are active but don't quite want to come to the surface. The relatively heavy weight of the hardbait allows for amazing long casts, while its versatility makes fishing a real pleasure.

Run the **Water Monitor** under the surface in "**walk the dog**"-style and watch it glide seductively through the water. Even at easy retrieve speed, it pulls in a nice S-curve and entices even the shyest fish to bite. During the sinking phase, it automatically produces tempting movements and its flanks flash, which triggers the bite even in this phase.

An outstanding lure that provides exciting fishing moments all year round and is suitable for both beginners and experienced anglers.
