

Hybrida lure jerkbait J2 DOEB sinking 12cm 55g

Hybrida

Product number: HYB-J2S-DOEB

17,50 €* 17,50 €

Hybrida Jerkbait J2 has very good casting qualities and due to its weight of 55 g can be used even with lightweight rods. Due to the lure's light top-heaviness it stays at the desired depth for a short time period.

The "J 2" has very good casting qualities and can be used even with lightweight rods (Spinning combos)

Even the slightest rod movements make this lure break out from side to side, provoking the fish. The glider sinks middle fast but it can be successfully used both in shallow waters (from 50 cm onwards) and in deep water sections (up to 3 m).

The J2 is a top jerkbait in the glider family. Equipped with perfect casting qualities, the J2 finds fish in deep waters (up to 3 m). It shows all its skills as it is being led in longer movements and the additional "up and down" twitches.

A very important feature of the "J2" is the extremely attractive "shivering" at the spin-stop - no pike can resist this!
